

CUDA Tools for Debugging and Profiling

CUDA Course, Jülich Supercomputing Centre

Overview

What you will learn in this session

- Use cuda-memcheck to detect invalid memory accesses
- Use Nisght Eclipse Edition to debug a CUDA program
- Use the NVIDIA Visual Profiler, use nvprof

Contents

Debugging cuda-memcheck Nsight Eclipse Edition Tasks Profiling nvprof Visual Profiler Tasks

Debugging

Andreas Herten | CUDA Tools for Debugging and Profiling | 3 August 2016

#3|19

cuda-memcheck

Command-line memory access analyzer

- Memory error detector; similar to Valgrind's memcheck
- Has sub-tools, via cuda-memcheck --tool NAME:
 - memcheck: Memory access checking (default)
 - racecheck: Shared memory hazard checking
 - Also: synccheck, initcheck
- Remember to compile your program with debug information: add -g (host) or -G (device)
- \rightarrow http://docs.nvidia.com/cuda/cuda-memcheck/

Example

Start via cuda-memcheck PROGRAM

Tasks — herten@zam231 —ug-2016/Tasks — -zsh
<pre>\$ cuda-memcheck task1-cuda-memcheck</pre>

Nsight Eclipse Edition

- Full-fledged IDE for CUDA development; based on Eclipse
 - Source code editor with CUDA C / C++ highlighting
 - Project / file management with integration of version control
 - Build system
 - Remote capabilities
 - Graphical interface for debugging heterogeneous applications (command line utility: cuda-gdb)
 - Integrated NVIDIA Visual Profiler
 - Also: Nsight Visual Studio Edition (only Windows)
- \rightarrow https://developer.nvidia.com/nsight-eclipse-edition/

Task 1

Use cuda-memcheck to identify error

- Location of code: CUDATools/Exercises/Tasks/
- Steps
 - Build:
 - make task1-cuda-memcheck
 - Run:

cuda-memcheck ./task1-cuda-memcheck

- Fix!

Look into task1-cuda-memcheck.cu and fix error; cuda-memcheck should run without errors!

JURECA Getting Started

```
module load GCC/4.9.3-2.25 CUDA/7.5.18
salloc --reservation-gpu-kurs --partition-gpus --nodes=1 --time=1:30:00 --gres=mem128,gpu:4
srun cuda-memcheck ./tasH1-cuda-memcheck
```

Use Nsight Eclipse Edition to debug program

- Location of code: CUDATools/Exercises/Tasks/
- Steps
 - Build program:
 - make task2-cuda-gdb
 - Start Nsight Eclipse Edition: nsight
 - Setup debug session:
 See above
 - Let thread 4 from first block print 42 (instead of 0)
 Do not change the source code! Use the variable view.

JURECA Interactivity

```
module load GCC/4.9.3-2.25 CUDA/7.5.18
salloc --reservation=gpu-kurs --partition=gpus --nodes=1 --time=1:30:00 --gres=mem128,gpu:4
srun --forward-x --pty /bin/bash -i
nsight
```

Profiling

Andreas Herten | CUDA Tools for Debugging and Profiling | 3 August 2016

#12|19

Motivation for Measuring Performance

- Improvement possible only if program is measured Don't trust your gut!
- Identify:

Hotspots Which functions take most of the time? Bottlenecks What are the limiters of performance?

- Manual timing possible, but tedious and error-prone
 Feasible for small applications, impractical for complex ones
- Easy access to hardware counters (PAPI, CUPTI)

nvprof

Command-line GPU profiler

- Profiles CUDA kernels and API calls; also CPU code!
- Basic default profiling data, much more available with:
 - --events E1, E2: Measure specific events List available events via --query-events
 - --metrics M1,M2: Measure combined metrics List available metrics via --query-metrics
- Further useful options
 - --export-profile: Generate profiling data for Visual Profiler

Handy together with --analysis-metrics (gather data for *analysis mode* of Visual Profiler)

- --print-gpu-trace: Show trace of function calls
- --unified-memory-profiling per-process-device: Print unified memory profiling information

Prevent zero-copy fallback with CUDA_MANAGED_FORCE_DEVICE_ALLOC=1

--help: For all the rest...

- Timeline view of all things GPU (API calls, kernels, memory)
- View launch and run configurations
- Guided and unguided analysis, with (among others):
 - Performance limiters
 - Kernel and execution properties
 - Memory access patterns
- NVIDIA Tools Extension NVTX (for annotation)
- \rightarrow https://developer.nvidia.com/nvidia-visual-profiler

Task 3

Analyze and profile scale_vector_um

Do any (all?) of the following:

▲ Use nvprof to gather profile, Visual Profiler for viewing

- Use nvprof to write scale_vector_um's timeline to file
- Import to Visual Profiler
- Use nvprof to add metric information to timeline
- Import, run guided analysis in Visual Profiler
- **B** Use Visual Profiler for everything
 - Start an interactive session on JURECA
 - Launch Visual Profiler (nvvp)
 - Start, profile, and run guided analysis in Visual Profiler

JURECA Reminder

```
module load GCC/4.9.3-2.25 CUDA/7.5.18
salloc --reservation=gpu-kurs --partition=gpus --nodes=1 --time=1:30:00 --gres=mem128,gpu:2
```

srun nvprof ./scale_vector_um

srun --forward-x --pty /bin/bash -i
nvvp

Summary

- NVIDIA has handy tools to gain insight into application
- Debugging:
 - cuda-memcheck
 - cuda-gdb
 - Nsight Eclipse Edition
- Profiling:
 - nvprof
 - Visual Profiler
- All come with the CUDA Toolkit

Thank you!

Slides based on Jiri Kraus' CUDA Tools presentation
